

DVT Pump, Compression Device for Clinical Settings

Description

Designed for durability in busy hospital and clinic settings, the Triple Play Pro DVT compression device helps prevent deep vein thrombosis after surgery. This pneumatic compression pump provides alternating, intermittent sequential compression for DVT prevention. In addition, the Triple Play Facility SCD pump utilizes cold and compression therapy using the additional AUX port. Triple Play Pro fosters a continuum of care from hospital to home when used with the Triple Play VT DVT-EZ Home Care Kit.
